1.Write a PL/SQL block that declares two variables: one for a user's name (VARCHAR2) and one for their age (NUMBER). Assign values and print both using DBMS_OUTPUT.PUT_LINE.

Answer:

```
        DECLARE
   v_name VARCHAR2(50) := 'Alice';
   v_age  NUMBER := 22;
BEGIN
   DBMS_OUTPUT.PUT_LINE('User Name: ' || v_name);
   DBMS_OUTPUT.PUT_LINE('User Age: ' || v_age);
END;
/
```

2.Create a PL/SQL block that uses an IF statement to check if a given order amount is above 500. If yes, print 'Eligible for free delivery', else print 'Delivery charges apply'.

Answer:

```
DECLARE
                v_order_amount NUMBER := 600;
        BEGIN
           IF v_order_amount > 500 THEN
              DBMS_OUTPUT.PUT_LINE('Eligible for free delivery');
           ELSE
              DBMS_OUTPUT.PUT_LINE('Delivery charges apply');
           END IF;
        END;
        /
```

3.Write a PL/SQL block that uses a simple LOOP to print the numbers 1 to 5 using DBMS_OUTPUT.PUT_LINE.

Hint: Use a counter variable and EXIT WHEN condition inside the loop.

Answer:

```
DECLARE
                v_counter NUMBER := 1;
        BEGIN
           LOOP
              DBMS_OUTPUT.PUT_LINE(v_counter);
              v_counter := v_counter + 1;
              EXIT WHEN v_counter > 5;
           END LOOP;
        END;
        /
```

4.Declare a cursor in PL/SQL to select all product names from a table called PRODUCTS. Fetch each product name and print it using DBMS_OUTPUT.PUT_LINE.

Hint: Assume the PRODUCTS table has a column PRODUCT_NAME.

Answer:

```
DECLARE
         CURSOR c_products IS
              SELECT product_name FROM products;
           v_prod_name products.product_name%TYPE;
BEGIN
   OPEN c_products;
```

```
            LOOP
               FETCH c_products INTO v_prod_name;
               EXIT WHEN c_products%NOTFOUND;
        DBMS_OUTPUT.PUT_LINE(v_prod_name);
    END LOOP;
    CLOSE c_products;
END;
/
```

5.Write a PL/SQL block that tries to divide two numbers entered as variables. If a division by zero occurs, catch the exception and print 'Cannot divide by zero'. Otherwise, print the result.

Answer:

```
DECLARE
           v_num1   NUMBER := 10;
            v_num2   NUMBER := 0;
            v_result NUMBER;
BEGIN
            v_result := v_num1 / v_num2;
            DBMS_OUTPUT.PUT_LINE('Result: ' || v_result);
EXCEPTION
            WHEN ZERO_DIVIDE THEN
               DBMS_OUTPUT.PUT_LINE('Cannot divide by zero');
END;
/
```
