1.Create a table called Playlist with columns: id, song_name, artist, genre, and play_count. Insert at least 5 sample records representing your favorite songs from Spotify.
Answer:

```
CREATE TABLE Playlist (
        id INT PRIMARY KEY AUTO_INCREMENT,
        Song_name VARCHAR(),
        Artist VARCHAR(),
        genre VARCHAR(),
        play_count INT );

INSERT INTO Playlist (song_name, artist, genre, play_count) VALUES
        ('Blinding Lights', 'The Weeknd', 'Pop', 150),
        ('SICKO MODE', 'Travis Scott', 'Hip-Hop', 95),
         ('Levitating', 'Dua Lipa', 'Pop', 120),
         ('God\'s Plan', 'Drake', 'Hip-Hop', 200),
        ('Bad Guy', 'Billie Eilish', 'Pop', 80);
```

2.Write a SELECT query to display only the song_name and artist from the Playlist table, but show the artist column as 'Singer' using an alias.
Answer:

```
SELECT song_name , artist as singer FROM Playlist;
```

3.Write a SELECT query to find all songs in the Playlist table where the genre is 'Pop' and play_count is greater than 100. Sort the results by play_count in descending order.
Answer:

```
SELECT songs FROM Playlist WHERE genre = “Pop” AND play_count >100;
ORDER BY play_count DeSC;
```

4.Use the COUNT aggregate function to find out how many songs in your Playlist table belong to the genre 'Hip-Hop'.
Answer:

```
SELECT * COUNT FROM Playlist WHERE genre = “Hip-Hop”;
```

5.Write a SELECT query that shows the total number of plays (SUM of play_count) for each genre in your Playlist table, grouped by genre.
Answer;

```
SELECT genre , SUM(play_count) as total_count FROM Playlist;
GROUP BY genre;
```
